L8	0	((An electrode comprising) and (an electrode body having a first "and" second side) and (wherein the first side comprises a flexible moisture barrier layer comprising a heat-sealable periphery "with" a peel tab extending therefrom) and (the second side comprises a conductive layer) and (an electrically conductive gel layer disposed on the electrode body) and (which is further in electrical communication "with" the conductive layer) and (the periphery of the heat-sealable moisture barrier layer extending beyond the periphery of the gel layer) and (a rigid non-conductive release liner to which the flexible moisture barrier layer is heat-sealed around the periphery of said gel layer by a heat seal "with" the gel layer in contact "with" the release liner to form a vapor, air, "and/or" moisture-proof enclosure of the gel layer) and (so that the electrode may be stored in a desiccation-retarding condition without the need for storing the electrode in a separate desiccation-retarding pouch or envelope)).clm.	USPAT; UPAD	ADJ	ON	2010/07/16 14:41
----	---	--	-------------	-----	----	---------------------

L9	0	((A self-storing electrode system) and (first "and" second electrode bodies each having a first "and" second side) and (wherein the first side comprises a flexible non-conductive moisture barrier layer having a heat-sealable periphery "with" a peel tab extending therefrom) and (the second side comprises a conductive layer which does not extend to the periphery of the moisture barrier layer) and (an electrically conductive gel disposed on each of the electrode bodies which is in electrical communication with the conductive layer of each electrode) and (a rigid release liner sealed by a heat seal to the periphery of the flexible moisture barrier layer of each electrode body "with" the gel in contact "with" the release liner to enclose, protect "and" prevent desiccation of the gel layer of each electrode body without the need for a separate enclosure such as a pouch or envelope) and (a lead wire electrically coupled to each electrode body by means of a path that does "not" disrupt the moisture integrity of the release liner "seal.")).clm.	USPAT; UPAD	ADJ	ON	2010/07/16 14:46
----	---	---	-------------	-----	----	---------------------

L10	0	((An electrode system) and (a pair of electrodes disposed on opposite sides of a rigid non-conductive release liner from which the electrodes may be peeled "and" removed) and (wherein each electrode comprises an electrode body having first "and" second sides) and (wherein the first side comprises a flexible, nonconductive moisture barrier layer having a sealable periphery) and (the second side comprises a conductive layer) and (an electrically conductive gel layer interposed between the conductive layer and the rigid non-conductive release liner in a vapor, air) and (moisture-proof enclosure formed by the sealing of the periphery of the moisture barrier layer of each electrode to the release liner to enclose the gel layer of each electrode in a moisture barrier enclosure on its respective side of the rigid release liner)). clm.	USPAT; UPAD	ADJ	ON	2010/07/16 14:48
-----	---	---	-------------	-----	----	---------------------

L11	0	((An electrode system) and (a pair of electrodes disposed on opposite sides of a rigid non-conductive release liner from which the electrodes may be peeled "and" removed) and (wherein each electrode comprises an electrode body having first "and" second sides) and (wherein the first side comprises a flexible, non-conductive moisture barrier layer having a sealable periphery) and (the second side comprises a conductive layer) and (an electrically conductive gel layer interposed between the conductive layer) and (the rigid non-conductive release liner in a vapor, air) and (moisture proof enclosure formed by the sealing of the periphery of the moisture barrier layer of each electrode to the release liner to enclose the gel layer of each electrode in a moisture barrier enclosure on its respective side of the rigid release liner) and (wherein the electrodes are further in electrical contact with each other through a conductive path that is disposed within the non-conductive release liner) and (which is in electrical contact with both electrodes	USPAT; UPAD	ADJ	ON	2010/07/16 14:48
-----	---	--	-------------	-----	----	---------------------

through said gel  
layers)).clm.
